

“Having our email controlled in the cloud [with Websense Hosted Email Security] takes the load off our in-house servers and eliminates the need for any day to day management.”

**Terry Kemp**  
Infrastructure manager  
Nelson Marlborough  
District Health Board

Over 85 percent of unwanted email contains a URL link.

Better email security comes from seeing the big picture. Websense Hosted Email Security provides leading protection from converged email and Web2.0 threats.

**Websense**

# Hosted Email Security

Websense® is known for safeguarding the Web with best-in-class Web security. Now, the same research and intelligence that made Websense the recognised leader in Web security forms the backbone of our powerful email security.

Today's Web and email threats are more invasive and abundant than ever with attack volumes surging to new heights. Threats are also becoming more complex and converging with over 85 percent of unwanted emails now containing a URL link.\* Businesses of all sizes are finding that their network infrastructure is under significant strain and their administrative resources are over-burdened.

Stopping today's email threats requires expert technology in both email and Web security. Websense Hosted Email Security provides leading protection from converged email and Web 2.0 threats by leveraging the power and intelligence of the Websense ThreatSeeker™ Network. The hosted security model provides reduced costs and complexity while allowing businesses to retain control and eliminate uncertainty through industry-leading service level agreements. With Websense Hosted Email Security, customers gain mission critical security while enabling a consolidated security strategy with the trusted leader in Essential Information Protection™.

Websense Hosted Email Security enables customers to:

- **Reduce business costs and complexity** with no on-site equipment to install or maintain, savings in bandwidth and storage, no unexpected expenditures, and eased administrative overhead
- **Increase protection** with leading security from converged email and Web 2.0 threats backed by industry-leading SLAs and the power of the Websense ThreatSeeker Network
- **Retain control** with 24x7 access and flexible customisation of policies, configuration settings, quarantine management, and reporting

Websense Hosted Email Security provides leading protection from converged email and Web 2.0 threats.

\* Websense Security Labs Threat Report, July 2008

## Websense ThreatSeeker Network

The Websense ThreatSeeker Network adaptive security technology uses more than 50 million real-time data collecting systems that continuously monitor Internet content—including new and dynamic content—for zero-hour protection from emerging threats. This research and intelligence is fed, in real-time, to the Websense solutions portfolio. As a result, Websense is able to adapt to the rapidly changing Internet at speeds not possible by traditional security solutions.

## Summary

Websense Hosted Email Security provides leading protection from converged email and Web 2.0 threats. The hosted security model reduces costs and complexity while allowing businesses to retain control and eliminate uncertainty through industry-leading service level agreements. With Websense Hosted Email Security, customers gain mission-critical security while enabling a consolidated security strategy with the trusted leader in Essential Information Protection.

## Websense Hosted Email Security available packages:

- **Hosted Antispam:**  
Guards against converged email and Web 2.0 spam attacks and is backed by a 99 percent spam detection service level agreement.
- **Hosted Email Security:**  
Guards against converged email and Web 2.0 attacks and is backed by SLAs ensuring 99 percent spam detection and 100 percent known-virus protection.
- **Hosted Email Security and Content Control:**  
Guards against converged email and Web 2.0 attacks, enables email content control with end-to-end encryption and customised lexical analysis and is backed by SLAs ensuring a 99 percent spam detection rate and 100 percent protection against known viruses.

Websense Hosted Security Model		Hosted Antispam	Hosted Email Security	Hosted Email Security & Content Control
Top-tier global data center infrastructure	Built-in failover, scalability, and disaster recovery backed by ISO27001 certification, ensuring security and data privacy.	●	●	●
Extensive reporting and flexible policies	Visibility and control with 24x7 access to forensic dashboard, detailed reports, and policy settings.	●	●	●
Spooling and disaster recovery	Ensures email is never lost, even during a planned or unplanned outage.	●	●	●
Websense Email Security Components				
Leading protection from converged email and Web 2.0 threats	The ThreatSeeker Network stops converged email and Web 2.0 threats before they reach the network.	●	●	●
100 percent protection from known virus threats	Faster day-zero protection with the ThreatSeeker Network along with antivirus engines, so that the network remains uninfected from email or Web-borne viruses.		●	●
Email content and file attachment analysis	Enables good corporate governance through content filtering for appropriate language and file attachments.			●
Data protection and compliance management	Helps secure confidential data and ensure compliance through email encryption and customisable content filtering.			●
Flexible and simple quarantine management	Provides flexibility for employee management of individual spam quarantine and black and white lists.	●	●	●

## How It Works

Protecting the network with Websense Hosted Email Security is easy. Simply point MX records to the Websense data centers, and all email is filtered before it reaches the network, providing significant bandwidth and storage savings. Websense data centers are load-balanced, redundant, highly available clusters located in 10 locations worldwide. The hosted service is certified to ISO27001 standards to provide the highest degree of global and localised security,

privacy, and confidentiality. Backed by industry-leading service level agreements, Websense provides spooling and disaster recovery provisions as standard elements of the service.

Websense Hosted Email Security also works hand-in-hand with Websense Hosted Web Security to provide integrated email and Web protection enabling organisations to optimise their email use and to safely leverage the power of Web 2.0 technology.
